App interface and login

"Pearing" Screen to interact with others

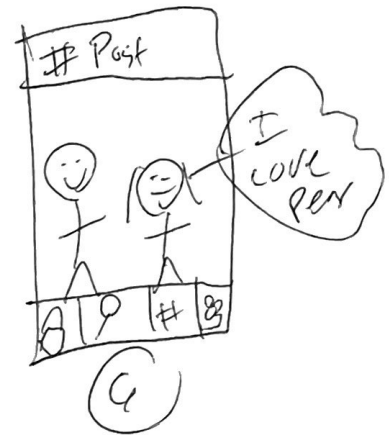

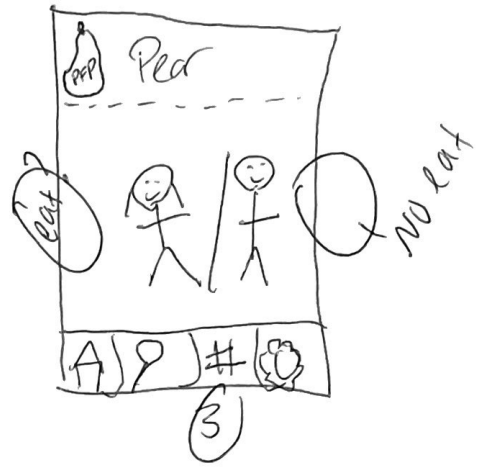

Idea of two people pairing together on the app.

Message (DM) between people after you match

Cody Tang

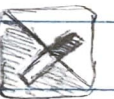

- ① This is the first screen the user sees. It is very funny, welcoming, & cute so that the user will continue with the application. It is very intriguing for them.
- ② After the greeting page, the user will then be prompted to either log in if they are a former user or then get prompted to sign up if they are a first time user.
- ③ Once getting an account, setting up the settings, the user will then be shown other funny people who have common interests, then the user will decide to either eat or not eat the pear to create or not create a pair.
- ④ After a match is made, a big celebratory page shows, with the special person in the pair. It will also rain pears/confetti & say "IT'S A PAIR!"

⑤ After, the user can turn on the special power to create a band w/ him. After this, Peer LLC is essentially done. The rest is up to the user.

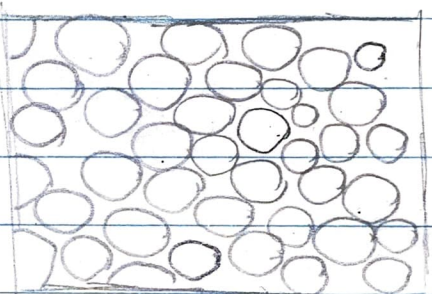

④ After, a good connection is made, & a outball connection (IRL) is built, they can run past it on the Hasty Pass & ~~for~~ show off the new couple.

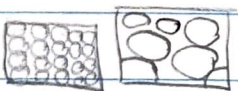

Pair - the App
